ormus/index.htm](http://www.subtleenergies.com/ormus/index.htm)

Soon after I learned to read in the late 1950s, I discovered comic books. My favourites were the comic books about superheroes like Superman, Green Lantern and Batman. In the early 1960s I began reading science fiction, with Robert A. Heinlein and Isaac Asimov as my favourite authors. When Heinlein's *Stranger in a Strange Land* appeared on my local library shelf in the mid-1960s, I was so fond of it that I read it a dozen times. The combination of psychic abilities and improved social interaction that it portrayed was very appealing to me as a young teen.

In the late 1960s my favourite science fiction book became *Dune*, by Frank Herbert. I was very attracted to the idea that a substance (the "spice") could facilitate psychic communication and even play a role in teleportation for interstellar travel. Little did I know then that I would eventually manifest such a substance in my life.

Throughout the 1970s I became more interested in "spiritual" teachings, such as the words of Edgar Cayce and Jane Roberts/Seth and the lost gospels about Jesus. All of these teachings had a common thread: they taught that each of us is responsible for what happens to us in our own life. I think that Seth said it best: "You create your own reality." When I first read that in 1974, I wondered about what kind of reality I might like to experience and how it might manifest.

In the 1980s I became very familiar with concepts such as the limits of growth, global warming, peak oil and the dominance of structures in our world. In the late 1980s and most of the 1990s I worked as an environmentalist and forest activist.

In all of these things I became very aware of the contrast of what was out there in the world, and this stimulated my desire to see more cooperation and connection among people.

Many of the problems that we deal with in the world can be traced to the structures that we have created and empowered to act on our behalf. We create these structures and empower them, and then they take on a life of their own. The structures we created become our masters instead of our servants as we originally intended.

Jim's experiences with toxic metals

In the mid-1970s I met an inventor named Jim. In the mid-1980s I worked with him, helping him to build and market his super ozone generator. In 1987 I began to encourage Jim to use the ozone from this generator to help clean up various types of toxic waste that I was encountering as an environmental activist.

In 1989 Jim began using his ozone generator to help clean up the toxic waste water from a gold mine in eastern Oregon. While using his generator on this waste water, he noticed that some very unusual things were happening. He would get a "snot-like" substance in the settling tank that would "disappear in a flash of light" if it was dried out in the sunlight and would fly away from his hands if he dried it in the dark. Because of these properties, he called the dry powder "fly ash". One time he even noticed that a puddle of "water" that appeared under the

settling tank would move toward the nearest person.

You can read the transcript of an interview that I conducted with Jim about these events at <http://www.subtleenergies.com/ormus/tw/jimstory.htm>.

After Jim had been working on the mine waste clean-up for several weeks, he accidentally got some of the ozone-activated waste water on his hands and experienced a serious reaction. He got a shock from the water and let go of the leaking fitting that he was trying to reseal. When he opened his fingers, fibres of gold came out the back of his hands.

For several weeks after this event, he would generate a spark every time he touched anything. Soon after the accident, he started feeling very sick and went to a doctor. The doctor did some tests and told Jim that he had *four times* the lethal levels of lead and arsenic in his blood. But Jim did not die in two weeks as his doctor had predicted. Instead, he began sleeping for 20 or more hours a day for the next 18 months. Toward the end of that time, he was tested by another doctor who said that he had *twice* the lethal levels of lead and arsenic in his blood; this was a remarkable improvement.

While this was happening to Jim, I lost contact with him. I was still trying to promote the use of his ozone technology to clean up toxic waste but, every time I called, the folks he was staying with would tell me that he was sleeping and could not be disturbed. I think what they really meant was that he could not be awakened. Eventually I did reach him, and he told me about his condition resulting from the toxic levels of metal in his body.

My mom owned a health food store, so I went there and asked her about what might help a body eliminate toxic metals. She suggested a booklet by Dr Kurt W. Donsbach titled *Hydrogen Peroxide*, which described how to use peroxide to help the body to eliminate lead and arsenic, to chelate them out. So I bought the book and some of the 35% hydrogen peroxide recommended in it, and took them to Jim. At first he drank just a couple of drops in a glass of water. He got really sick and vomited, but the next day he felt better so he did it again. Every day he'd feel a little less sick after drinking a few drops of the hydrogen peroxide in water, and the next day he'd feel better.

I interviewed Jim on tape in 1995. Here is his description of some of the changes after he started with the peroxide:

"I got rid of the background hallucination, that blue, bluish-purple, blue light, like in one or two doses. It made me so sick the first time...that I felt like I was going to die. Very, very nauseous, disoriented, etcetera, etcetera. My urine was literally a dark, dark, dark, dark, dark, dark brown; reddish. More red than...but I did not feel well.

"I still saw colour until I started taking hydrogen

peroxide, and it all quit like that. About three doses of hydrogen peroxide and I quit seeing colour and I quit hearing audio hallucinations."

After a few weeks of the peroxide, he was feeling good enough that he decided to have another check-up. This time the doctor said: "There's nothing wrong with you. No lead and arsenic. Normal levels. You're fine. No problem. What were we concerned about?"

In the interview Jim said that after two weeks of taking the hydrogen peroxide, the toxic metals in his blood went from twice the lethal levels to "very, very low levels".

But *something* kept Jim alive during those 18 months. *Something* reduced the toxic metals from four times to only twice the lethal levels. What was it? I didn't know what it was. Jim didn't know what it was. No one seemed to know. It was mysterious. It was scary because something (probably the lead and the arsenic) was nearly killing him. He was getting sicker and sicker, and then he started to get

well for mysterious reasons that no one could understand.

During the period when he was sleeping all the time, he was practically incoherent; you couldn't talk to him. He was somewhere else. He later said: "I don't know where I was, but I was not here."

Jim told me more of his story after he took the peroxide. This was the most incredible story I had ever heard in my life. I witnessed some of the things

myself before he got his hands in the mine waste water and got "nuked", as he called it. I saw the gold fibres from the back of his hands, but he told me most of the story somewhat later.

It struck me that this miracle stuff was like the "spice" I had read about in Frank Herbert's book *Dune* as a youth. This stuff seemed to do everything: it floated away; it disappeared in a flash of light; it even caused Jim to become a great generator of static electricity! Something about it kept Jim alive when he should have died.

After he told me the whole story in 1991, I often said: "Jim, let's look into this." He would say: "No, I don't want to have anything to do with it. It's awful." I wanted to explore this magical stuff further, but Jim would not cooperate.

David Hudson's ORMEs

I did get Jim to tell his story to a couple of friends, and one of them contacted me in 1995 to tell me about a gentleman named David Hudson who also had a substance that disappeared in a flash of light and would float away from your hands if you reached for it.

I immediately contacted Jim and told him about the magical materials that David Hudson called "ORMEs" (Orbitally Rearranged Monatomic Elements). This

This stuff seemed to do everything: it floated away; it disappeared in a flash of light; it even caused Jim to become a great generator of static electricity!

intrigued Jim, and fortunately we both got to go to David Hudson's 1995 Portland, Oregon, lecture and even got to shake Hudson's hand. But we decided not to tell him about Jim's experiences because we felt that it would be better if all of the ORME eggs were not in the same basket. This looked like a technology that might be quite threatening to existing structures.

Hudson's method for making ORMES was quite difficult and involved. I knew that these substances might never come into widespread use if we did not find some easier ways to obtain them.

Once he understood a bit more about the nature of the ORME materials, Jim was no longer afraid of them and he decided to experiment with the use of ozone to make them from metal. Jim's ozone method worked quite well, but it was also difficult and required his proprietary ozone generator to work at all. We clearly needed some simple methods for obtaining ORMES that anyone could use.

In order to get more people aware of these materials, I transcribed David Hudson's Portland lecture and got it up on the Internet in February 1996. This was soon followed by the transcripts of a couple of other lectures that others helped to transcribe. The WhiteGold Internet forum was also started in February 1996 by several people who had been to Hudson's lecture in Tampa, Florida. I was one of the original members of this forum and currently am its moderator.

In his lectures, David Hudson mentioned many ancient references that he felt might be related to the substances he had been working with: the biblical *manna*, the Philosopher's Stone, the Fountain of Youth, orgone energy, *prana*, *ch'i*, the Holy Grail, the Great Pyramid and the Ark of the Covenant are a few of these.

Though David Hudson called these materials "ORMES", I prefer to call this form of matter "ORMUS" because we are not sure that the materials are really monatomic. The term "ORMUS" also has a rich history that is quite compatible with these substances.

NEXUS Magazine first published a two-part article on David Hudson and ORMES in mid-1996 [vol. 3, nos 5 & 6]. This was followed by several articles by Laurence Gardner on some of the possible ancient references to these materials. The first of these articles was published in late 1998 [vol. 5, no. 6]. These ancient references to mysterious or alchemical substances suggested that there must be easy and low-tech ways to obtain the ORMUS materials.

ORMUS extraction methods

In early May 1997 I learned about a gentleman from the Northwest who had spoken to the Ramtha School in Yelm, Washington. This gentleman taught the folks some new techniques for making ORMUS. I learned of him from an ORMUS colleague named John, who described him thus:

"Apparently, it is his attitude that this knowledge should be shared with the world and he is into doing so without regard to control or profit for himself...

"It appears that his processes involve a simple chemical method of precipitating ORMES and other minerals out of sea water into something folks are calling 'the milk of the gods!'"

This sounded like it might be the simple kitchen-chemistry method we were looking for, so John and I arranged to drive up and meet with this fellow. When we got there, we were greeted by a short, dark-haired man in his late fifties. He gave us permission to record our conversations but requested that we keep his name and contact information anonymous. When we eventually put the methods that he taught us on the Internet, we decided to call this gentleman "the Essene" for reasons which I will explain in a bit.

On 18 May 1997 the Essene showed us how to make the white precipitate of sea water using the Wet Method. He also described other methods while we were there. When we returned home, we each typed up our notes about these methods and posted them to a private email discussion list that we had formed for this type of thing.

I visited the Essene at his place four times. One of these times I took Jim to meet him. The Essene told us that he has always remembered a past life as an Essene on the Dead Sea. He said his first

memories of this came when he was living on the Pacific coast as a child. He said that at the age of six, he was allowed to go fishing off the pier by himself. He caught some fish and put them in a bucket but decided to dump them and fill the bucket with ocean water instead. He took this water home and added lye to it till precipitate fell out. Remembering the process from his life on the Dead Sea, he washed the precipitate and ate it. He says that he has been eating this in one form or another till the present.

Our private email discussion list became quite active after the first visit with the Essene. We wanted to get the methods he had taught us out to the world via the Internet, but we also wanted to present these methods in the safest way possible.

Though David Hudson called these materials "ORMES", I prefer to call this form of matter "ORMUS" because we are not sure that the materials are really monatomic.

On 26 May 1997 we started editing our document on the Essene's methods. This document went through 21 versions and was finally mailed to 50 websites around the world on 8 April 1998. Only a couple of them put this document online.

So, now we had a way to concentrate the ORMUS elements using simple kitchen chemistry. Still, I wanted another easy way to obtain these materials just in case lye or sea water became difficult to get.

Jim's experiments showed that the ORMUS elements responded to magnetic fields as if they were superconductors (i.e., they levitated). He repeatedly demonstrated that they were capable of Josephson tunnelling (teleportation) and that they appeared to work as a "portal" for "emergent matter and energy".

I documented several of Jim's experiments by videotaping them and making audio recordings of his explanations. (I generally share these video and audio recordings when I give my workshops, and I hope to share some related videos at the upcoming NEXUS Conference.)

Based on the presumed superconductivity of the ORMUS materials in water, Jim realised that it might be possible to concentrate the ORMUS portion of the water using some sort of magnetic trap. In the summer of 1996 Jim gave me a couple of magnetic traps to test in a stream near where I live. These traps proved to be a very effective way to concentrate the ORMUS elements in water, and over the next few years I published several magnetic trap plans on my website. You can find links to some of these plans at <http://www.subtleenergies.com/ormus/tw/magtrap.htm>.

Since then, Jim, myself and others have found that it is possible to get certain elements into the ORMUS state using a variety of methods. We have also found that the ORMUS elements are quite common in nature, though they are difficult to identify because they are practically invisible to spectroscopy.

ORMUS and consciousness

Various researchers have noticed that the ORMUS elements seem to play an important role in biological systems. The ORMUS elements also appear to do things in several consciousness-related areas, e.g., they appear to serve as the communication medium for thought. They also have other biological functions.

Some of the most profound discoveries that Jim and I made suggested that the ORMUS materials may be a major

factor in consciousness itself. David Hudson and the Essene also claimed that this is true.

We suspect that the ORMUS elements may facilitate faster and better communication between every cell, and may also facilitate better communication between the self and everything else in the universe. This faster and better communication seems to have helped me to manifest many of the things that I dreamed of as a kid. This rapid manifestation is not always a great thing. Here is an extreme example of this manifestation factor...

I have a friend who made the "charged" white powder of gold. In 2000, he spent several months duplicating

Hudson's process and getting the resulting "m-gold" product annealed. When he had the annealed white powder of gold, he tasted about six micrograms of it and within a few hours he was almost totally incapacitated.

After ingesting the ORMUS gold one time, he was unable to live normally for over a year because he would manifest everything he would think of. Soon after ingesting it, his behaviour became so strange that his wife told him that she was going to take him to the hospital, but he was able to convince her that they would not know what to do to treat complications arising from the ingestion of white powder of gold.

He said that his mind would call up anything that he thought of. He could generally control this during the day, but it became a real problem at night. If he thought about having an accident while driving, a car would show up out of the blue and almost hit him. He had to learn to stop thinking about what he did not want in order to avoid manifesting it. This rapid

manifestation of his fears became so intrusive that he had to spend every waking minute with his mind on things that took all of his attention. He avoided contact with people and performed mathematical calculations to keep his thoughts from going astray. He had to take sleeping pills to keep himself from dreaming.

This condition persisted with the same intensity for about six months, and with lesser intensity for another six months. He said he realised that *all* of his beliefs were only beliefs and that none of them was true in any fundamental way. He said that our beliefs are the foundations of physical reality and that, without them, things can get very shaky. This happened several years ago, but every time I talk with him about it he is noticeably upset, as the memories are very disturbing to him still.

Other ORMUS consumers have experienced similar effects, but to a much lesser degree. This kind of ORMUS

If he thought about having an accident while driving, a car would show up out of the blue and almost hit him. He had to learn to stop thinking about what he did not want in order to avoid manifesting it.

is quite difficult to make and is not sold by anyone. It is fortunate that the types of ORMUS that are available do not have this effect to such a degree.

This sort of thing is also a major topic in the movie *The Secret* and in the Abraham-Hicks teachings. According to these teachings, we create our own reality by experiencing contrast, which creates a desire for something better. The fulfilment of this desire is immediately delivered to our door, but we still must open the door and let it in. Here is how I think this might work with ORMUS as the communication medium...

Imagine that you're watching a channel that you don't like. When you intend to change the channel, you punch the remote control and it sends a certain frequency to the TV set and changes the channel. Now imagine that the frequency which the remote control sends out is *how you are feeling*. Feeling afraid or bad is the frequency that tunes in the channel you don't like. Feeling good changes the channel to what you want.

Your intention is not the frequency that tunes in the channel. *How you feel* is the frequency. I suspect that ORMUS is the medium that carries the frequency. The denser the medium, the faster the frequency travels through that medium. You can hear a train coming by putting your ear to the iron rail before you will hear it through the air. The denser medium will bring back more quickly the echo of whatever feeling you put into it.

If the ORMUS elements are a medium of communication between mind and spirit, they will bring us back the echo of whatever we are feeling about ourselves.

I think that this is what happens with ORMUS, especially the more powerful forms. I think it carries the resonance of our thoughts and beliefs and brings back the echo of their manifestation more quickly.

If this is true, then here is a way to tell if you are ready for the more powerful forms of ORMUS... Examine your life. Do things you don't like ever happen to you? Would you be happier if these things were intensified and more instantly connected to the thoughts that called them in? Conversely, notice how regularly the things you *do* like happen to you. When you wake up in the morning, do you contemplate your day with delicious anticipation or with dread?

Your beliefs are habits of thought, which ORMUS will not change. When you take ORMUS, it does not steal your free choice. It does not make you think only of what you want and prevent you from thinking of what you don't want. You still can choose which thought you are going to think in every moment. Be sure you always think of your angels and never think of your demons—for whichever you think of, you will manifest in your life, and this manifestation will

only be hastened and heightened by the ingestion of the more powerful forms of ORMUS.

It is easy to change how you feel by changing the channel with your thoughts. There is always something to think about that feels better. Go there and notice how "what you want" continues to show up with more regularity.

In summation, I suspect that the ORMUS elements provide an infinitely thick, instantaneous communication medium for our thoughts and intentions.

The link with frontier physics

Modern physicists and other scientists have observed this kind of instantaneous communication. They have even coined terms to describe it: *quantum coherence* or *non-local interaction*. Many of these scientists have also suggested that this instantaneous communication occurs in a "place" which underlies physical reality. The physicist David Bohm called this "place" the *implicate order*, and our physical reality the *explicate order*. The biologist Rupert

Sheldrake calls this "place" the *morphogenetic field*. Lynne McTaggart has written a book that collects much of the scientific research on this "place" of instantaneous communication. She calls this place *the field*, and that is the name of her book. You can read my review of *The Field* at <http://www.subtleenergies.com/>.

In 1924, Albert Einstein, building on the work of Satyendra Nath Bose, predicted that it should be possible for two or

more atoms to get into the same quantum state, their wavelengths becoming superimposed on one another. This state of matter is referred to as a Bose-Einstein condensate (BEC). It took a long time, but a BEC was finally created in a laboratory in 1995 by taking a small group of atoms to a millionth of a degree above absolute zero. The physicists who accomplished this won the 2001 Nobel Prize.

A BEC composed of many atoms would be, in effect, an infinitely dense substance. We believe that the ORMUS elements can become room-temperature BECs. If this is true, then they might form the basis for an instantaneous, non-local communication system like the mystical connection that sages of all ages have described. Let's call this communication system the "Innernet".

We think that the ORMUS elements may need to reach a certain concentration in the body before they make the quantum leap into better, conscious, coherent communication with the Innernet. Using ORMUS can help here, but this coherence is also a function of something the ancient sages called "one-pointed awareness".

If we alternate between hitting the good-feeling button on our remote control and hitting the bad-feeling button, we create interference patterns in the air.

Your intention is not the frequency that tunes in the channel. *How you feel* is the frequency. I suspect that ORMUS is the medium that carries the frequency.

In much the same way, the interference patterns of these two feelings may tend to prevent the ORMUS elements from getting into a coherent BEC state.

If we use ORMUS without learning how to focus our feelings on what we want, then we may often succeed in attracting what we don't want.

There is some evidence that the ORMUS elements facilitate coherent communication in the brain. Several ORMUS researchers have ingested different ORMUS products while hooked up to an EEG (electroencephalogram) machine. They all reported that their brain hemispheres went into greater coherence within a couple of minutes of ingesting the ORMUS. They reported that within about 10 minutes they went into a very deep "theta-delta" meditative state, though they were completely awake and aware while in that state. You can read some of these reports at <http://www.subtleenergies.com/ormus/tw/coherence.htm>.

Solutions for the future

But, some may argue, the consciousness effects of ORMUS may just be a "placebo effect", and, anyway, how does this help us to deal with the problems of peak oil, starvation and climate change that we seem to be facing right now?

I have been looking for ways that might mitigate or solve these problems for a couple of decades. The effects of ORMUS on plants seem to provide an answer to the "placebo" critics and to many of the global problems I've described.

Climate change, including global warming, is caused by a variety of factors which include changes in solar radiation, changes in reflection from the Earth's surface and increased levels of "greenhouse gases" like carbon in the atmosphere.

I believe that climate change and the end of the petroleum economy are the greatest threats to our well-being as a culture and as a species. I also believe that ORMUS has the potential to provide the most significant contribution to solving both of these problems. This is why...

First, atmospheric carbon comes from the burning of fossil fuels, deforestation, changes in ocean currents and the melting of the permafrost in Arctic regions, among other things. If there were a way to increase carbon sequestration (the binding of carbon in trees, soil, sea water and agricultural plants), this would pull carbon dioxide (one of the largest contributors to climate change)

out of the air and lock it up where it no longer works as a greenhouse gas.

It looks like ORMUS can more than double the growth of plants, and this will sequester more carbon. In vol. 14, no. 2 of NEXUS, Dr Roger Taylor described how the application of ORMUS elements in sea water precipitate has nearly doubled agricultural production in one year. In his article, you can see a picture I took that compared the size of a couple of walnut trees that the Essene grew.

One of the trees was more than four times the size and had more than four times the walnut yield after being given ORMUS sea water precipitate for four years, compared to the other tree grown without ORMUS. These

changes in agricultural production should also apply to increases in forest growth if ever ORMUS were applied to entire forests. The increase in biomass also implies an increase in biofuels.

Second, the underground ecosystem is also significantly enhanced by ORMUS. There is probably more biomass underground than there is above ground. One very significant component of this biomass is mycorrhizal fungi.

Sea water ORMUS precipitate typically doubles the mass of mycorrhizal fungi in soil within a month after application. Since these fungi can grow to become the largest organisms on Earth—forming an underground matrix connecting all the trees and other plants over many hectares of land—the application of ORMUS elements could significantly increase the sequestration of carbon in agricultural and forest soils.

Third, mycorrhizal fungi feed plants by dissolving minerals in the soil and helping to transport these minerals to the plants to which they are attached. Their presence reduces the need to add nutrients and fertilisers to the soil. Since these nutrients and fertilisers often come from petroleum sources and must be transported using fossil-fuel-fed vehicles, reducing by half the need for fertiliser will also significantly reduce the release of carbon into the air.

Fourth, the nutrients that have been put into solution and moved into the associated plants by the mycorrhizal fungi will remain bioavailable and eventually will make their way to the ocean, where they will feed the ocean

These changes in agricultural production should also apply to increases in forest growth if ever ORMUS were applied to entire forests. The increase in biomass also implies an increase in biofuels.

Continued on page 82

An ORMUS Manifestation

Continued from page 38

micro-organisms which are one of the Earth's greatest carbon sequestration factors. These ocean micro-organisms are finally being recognised as comprising one-third of all the Earth's biomass. They are also a major factor in global climate.

The ORMUS elements appear to provide a great way to bring about changes to existing structures—whether they be institutions like corporations, governments or religions—by facilitating the love connection. It looks like they can also be used to help us become less dependent on structures for food, health and energy.

When people talk about how geological, economic or social disaster will come, they are generally most afraid of how it will deplete their source of supply of those things that they think they need. They often do not realise that structures must change

or they will stifle life. With ORMUS, we have an opportunity to bring change to structures without the disastrous disruption which might otherwise accompany the destruction of these structures.

I know we are in a time of great change, but change does not have to mean disaster.

Those people who cooperate with their neighbours the best are more likely to prosper in these times than those who have filled bunkers with food, gasoline and guns.

I think that the greatest thing that the ORMUS materials will bring to the world is "instant karma". I have noticed that both my wants and my fears manifest much more quickly as I become more and more saturated with ORMUS. This nearly instant feedback is helping me to learn that I attract those things that I put my attention on.

I much prefer to put my attention on how we can build community and love in the world than to put my attention on

fear of the disasters that might result if we don't do this.

As we do build community and love in our neighbourhoods, we will find that our dependence on structures diminishes. This will be an enormous ORMUS manifestation! ∞

About the Author:

Barry Carter has a long-time interest in science and spirituality and a background in electronics, computer systems and environmental activism. He has been working almost full time on ORMUS research since 1996 and is passionate about networking information on developments in ORMUS research and applications.

You can visit his website at <http://www.subtleenergies.com/ormus/index.htm> and contact him by email at sumro@zz.com.

Barry Carter will make his ORMUS presentation on 4 October at the 2008 NEXUS Conference on the Sunshine Coast, Queensland, Australia.

SURVIVAL GUIDE TO...
stopping some b@\$!@&d legally stealing ALL your assets

Did you know NSW is the 2nd most litigious state in the WORLD (on a per capita basis) & QLD is the 5th? In California, which is no.1 in the world when it comes to litigation, one in every three men, women and children is either suing or being sued. If you are in business then you will most likely be sued 3 times in your lifetime - a shuddering statistic when you realize that NSW is next on the list.

There is no purer form of extortion than a lawsuit; the defendant has to decide whether to pay the plaintiff or pay his lawyer to defend the case. Any stupid allegation can be made against you & you have to show that you are innocent and pay for the privilege. Meanwhile the lawyers just love the

income stream and keep the 'taxi meter' running for as long as possible. So how do you PROTECT your assets from legal theft? Start by learning about Big Brother and how the rich play the game, then learn about the myths of asset protection...
